PARTNERS CORNER

Name and position

Robin Guldentops, Asset Manager.

Role and functions in the project

As an end-user, we aim to provide industry insights, defining requirements and offer feedback on the prototypes to ensure the solution meets real-world needs. We dispose of facilities that can serve as testing grounds for validating the technology and our market experience helps to assess the commercial viability.

What is the next milestone you are working on?

The next milestone we are focusing on involves reviewing the key exploitable results to investigate the commercial viability of the SIMAR solution. This step is crucial as it will determine how the innovations in this project can be effectively brought to market.
Additionally, we will be preparing for the pilot validation phase, which will be pivotal in demonstrating the benefits of the project.

In your opinion, what is the differential value of this project?

The differential value of this project lies in its multidisciplinary approach. By integrating expertise from various fields, the SIMAR team aims to develop a solution that not only meets but exceeds the requirements of the industry.
This collaborative effort ensures that we are addressing the problem from all angles, leading to a more comprehensice and effective solution. Furthermore, having the end users involved in an the early stages of the project provides valuable insights and feedback to ensure the solution is relevant to industry needs.

What would you highlight?

I would like to highlight the innovative spirit and collaborative nature of this project. The synergy between different disciplines and active involvement of alle partners is driving the progress. This partnership does not only accelerate the development process but also ensures that the solutions are robust and reliable.
